

### ASSIGNMENT 3

```
import pandas as pd
```

```
import numpy as np
```

```
df=pd.read_csv("C:/Users/admin/Downloads/iris.csv")
```

```
df.min()
```

```
df.loc[:, 'sepal_length'].min(skipna=False)
```

```
df.max()
```

```
df.loc[:, 'sepal_length'].max(skipna=False)
```

```
df.drop('species', axis=1).std()
```

```
df.loc[:, 'sepal_length'].std()
```

```
df.groupby(['sepal_length'])['sepal_width'].mean()
```

```
df = df.drop('species', axis=1)
```

```
df.mean()
```

```
df.mean(axis=1)[0:3]
```

```
df.median()
```

```
df.loc[:, 'sepal_length'].median()
```

```
df.mode()
```

```
df.loc[:, 'sepal_length']
```
